## Plan Overview

*A Data Management Plan created using DMPonline*

**Title:** Reconstruction of Kings Weston Roman Villa, Bristol, UK.

**Creator:**ALEX BIRKETT

**Principal Investigator:** Alex Birkett

**Data Manager:** Alex Birkett

**Project Administrator:** Alex Birkett

**Contributor:** Alex Birkett

**Affiliation:** University of Bristol

**Template:** University of Bristol Postgraduate Template

**ORCID iD:** 0000-0002-1150-5464

### Project abstract:

The creation of three-dimensional digital reconstructions of the Kings Weston Roman Villa, in Bristol, England.

This forms part of the PhD Research produced by Alexander T. R. Birkett [<https://orcid.org/0000-0002-1150-5464>] entitled "Virtual Ruins, Real Insights: Establishing A Framework for three-dimensional Modelling in Archaeology".

The Roman Villa of Kings Weston [Monument Num. 198239] is centred at ST5339 7755 in the housing estate of Lawrence Weston, Bristol. This site was excavated in 1947 by George Boon during post-war housing developments.

**ID:** 137923

**Start date:** 19-06-2016

**End date:** 20-11-2023

**Last modified:** 13-11-2023

You do not need to credit the creator(s) as the source of the language used, but using any of the plan's text does not imply that the creator(s) endorse, or have any relationship to, your project or proposal

# Reconstruction of Kings Weston Roman Villa, Bristol, UK.

## Project Summary

Provide a brief description of the project and the research being carried out. State if research is part of a larger project, department(s) and funders involved and where data fits in.

The creation of three-dimensional digital reconstructions of the sites of Kings Weston Roman Villa, in Bristol, England.

This forms part of the PhD Research produced by Alexander T. R. Birkett <https://orcid.org/0000-0002-1150-5464> entitled "Virtual Ruins, Real Insights: Establishing A Framework for three-dimensional Modelling in Archaeology".

This thesis aims to critically re-evaluate the state of Three-dimensional modelling within the field of archaeology by shifting the focus from physical fidelity to the rigour of interpretation. This is achieved with a focus on its pivotal role in documenting and reconstructing built structures, particularly domestic buildings, during and after excavation.

This is achieved through the application of three-dimensional recording techniques such as photogrammetry finite element analysis, lighting analysis, and methods for visually categorising levels of certainty. These are situated within a broader framework of methods to ensure ease of integration into the established processes of archaeological excavation.

The reconstruction of the Roman Villa of Kings Weston [Monument Num. 198239] is one of three case studies focusing on digitally reconstructing the archaeological remains. The Roman Villa of Kings Weston is centred at ST5339 7755 in the housing estate of Lawrence Weston, Bristol. This site was excavated in 1947 by George Boon during post-war housing developments.

## Data Types

### What types of data will be involved?

The data collected and produced will be the following:

- Geospatial survey data:
  - Total Station and/or GNSS GPS data.
  - UAV data.
  - Created geospatial data from plans.
- Vector Drawings:
  - Plans and sections of buildings and trenches where applicable.
  - Harris Matrix for excavations where applicable.
  - Extended Harris Matrix for reconstructions.
- Raster Images:
  - Photographs from UAV surveys.
  - Photographs from terrestrial surveys.
  - Photographs of artefacts.
- Documents:
  - Reports from lighting analysis.
  - Reports from photogrammetry surveys.
  - Reports from structural analysis.
  - Reports from terrestrial and aerial surveys.
  - Reports of reconstruction paradata
- Tabular data:
  - Database of site data.
  - Results from structural analysis.
  - Results from lighting analysis.
  - Calibration data for Photogrammetry.
  - Metadata for files.
  - File tree data for project folder.
- Three-Dimensional Reconstructions and Records
  - Three-dimensional model files.
  - Texture files for three-dimensional models.

### What file formats will be used?

Data will be stored, recorded, and organised according to the best practices outlined by the Archaeology Data Service (ADS) for the storage and archiving of digital data, including raster and vector data, geophysical data, geospatial data, three-dimensional data, and alpha-numeric documentary data.

| Data Type   | Archival File Types  |
|---|--|
| Alpha-numerical data  | Plain Text (.txt)<br>Delineated Text (.csv)  |
| Documentary data that may consist of just text, or text and pictures. | Plain Text (.txt)<br>Portable Document Format (.pdf/A)   |
| Raster imagery data   | Tag Image File Format (.tiff)<br>Portable Network Graphics(.png)<br>Adobe Digital Negative(.dng)   |
| Vector imagery data   | Scalable Vector Graphics (.svg)<br>Portable Document Format (.pdf/A)<br>Drawing Exchange Format (.dxf)<br>Graph Modelling Language (.xgml)     |
| Geodatabase   | Shapefiles (.shp) [this is accompanied by up to eleven reference files that are equally archival]<br>Delineated Text (.csv)<br>GeoTIFF (.tiff) |
| Three-Dimensional models (Records or Reconstructions)                 | Wavefront (.obj)<br>Stereolithography (.stl)   |
| Code  | R Code (.R)  |
| Compressed Files  | .zip   |
| Metadata & Paradata   | Delineated Text (.csv)<br>Plain Text (.txt)<br>Portable Document Format (.pdf/A)   |

### What will be the size of the files?

| Data Type   | Estimated File Size (Uncompressed) |
|---|------------------------------------|
| Alpha-numerical data  | < 01 GB                            |
| Documentary data that may consist of just text, or text and pictures. | < 01 GB                            |
| Raster imagery data   | < 40 GB                            |
| Vector imagery data   | < 05 GB                            |
| Geodatabase   | < 05 GB                            |
| Three-Dimensional models (Records or Reconstructions)                 | < 40 GB                            |
| Metadata & Paradata   | < 01 GB                            |
| <b>Total (Uncompressed)</b>   | < 90 GB                            |
| <b>Total (Compressed)</b>   | ~ 54 GB                            |

## Data Storage and Preservation

### How will the data be stored and kept safe?

Data prior to processing will be stored on University of Bristol SharePoint servers with two off-site backup of all data.

Once archived all data will be stored in The University of Bristol Research Data Storage Facility (RDSF), which provides secure, long-term storage for research data. This major investment provides nightly backup of all data, with further resilience provided by three geographically distinct storage locations. A tape library is used for backup purposes and also for long-term, offline data storage. Only authorised users can access data stored within the RDSF. The RDSF is managed by Bristol's Advanced Computing Research Centre (ACRC) which has a dedicated steering group and a rigorous data storage policy ([https://www.acrc.bris.ac.uk/acrc/RDSF\\_policy.pdf](https://www.acrc.bris.ac.uk/acrc/RDSF_policy.pdf)). The RDSF upholds and reinforces Bristol's wider Information Security Policy ([www.bris.ac.uk/infosec/policies/docs/isp-01.pdf](http://www.bris.ac.uk/infosec/policies/docs/isp-01.pdf)).

## Data Organisation

### How will data be organised?

| Primary Folder - Level One | Level Two      | Level Three     | Level Four | Level Five        | Level Six   | Contents description  |
|----------------------------|----------------|-----------------|------------|-------------------|---|---|
| 3D                         |                |                 |            |                   |   | Three-Dimensional Models  |
|                            | PROJECT FOLDER |                 |            |                   |   | The top-level folder containing all the files relating to a three-dimensional reconstruction model.       |
|                            |                | EXPORTED MODELS |            |                   |   | Three-dimensional model assets produced for the reconstruction.   |
|                            |                |                 | LANDSCAPE  |                   |   | The reconstructed landscape surrounding the model which had previously not been able to be reconstructed. |
|                            |                |                 |            | PHASE01           |   | The Phase reconstructed.  |
|                            |                |                 | COMPONENTS |                   |   | The folder containing all non-reconstruction related meshes.  |
|                            |                |                 |            | PHASE01_STRUCTURE |   | Structural meshes named with their BIM name and Extended Matrix name                                      |
|                            |                |                 |            |                   | STRUCTURE_STRUCTURAL AREA REINFORCEMENT_AREAREIN              |   |
|                            |                |                 |            |                   | STRUCTURE_STRUCTURAL BEAM SYSTEMS_STRUCTURALFRAMINGSYSTEM     |   |
|                            |                |                 |            |                   | STRUCTURE_STRUCTURAL COLUMNS_STRUCTURALCOLUMNS                |   |
|                            |                |                 |            |                   | STRUCTURE_STRUCTURAL CONNECTIONS_STRUCTCONNECTIONS            |   |
|                            |                |                 |            |                   | STRUCTURE_STRUCTURAL FABRIC REINFORCEMENT_FABRICREINFORCEMENT |   |
|                            |                |                 |            |                   | STRUCTURE_STRUCTURAL FOUNDATIONS_STRUCTURALFOUNDATION         |   |

|  |                                  |                    |                      |            | OTHER_PIPE FITTINGS_PIPEFITTING                        |  |
|  |                                  |                    |                      |            | OTHER_PIPE INSULATIONS_PIPEINSULATIONS                 |  |
|  |                                  |                    |                      |            | OTHER_PIPES_PIPES                                      |  |
|  |                                  |                    |                      |            | OTHER_PIPES_PIPECURVES                                 |  |
|  |                                  |                    |                      |            | OTHER_PIPING SYSTEMS_PIPINGSYSTEM                      |  |
|  |                                  | MATERIAL LIBRARIES |                      |            |  | Image files used for materials and textures of meshes within 3Ds Max.                            |
|  |                                  | RENDER OUTPUT      |                      |            |  | The output location for all rendered images.   |
|  |                                  | RENDER PRESETS     |                      |            |  | A folder to store preset settings for render engines within 3Ds Max.                             |
|  |                                  | SCENE ASSETS       |                      |            |  | Additional assets used for reference or help.  |
|  |                                  |                    | IMAGES               |            |  | Image files used specifically for rendering or to aid in the alignment of cameras for rendering. |
|  |                                  |                    |                      | ANIMATIONS |  | Animations stored as single frames produced from the reconstruction model.                       |
|  |                                  |                    |                      | IMAGES     |  | Images of rendered scenes of the reconstruction model.   |
|  | STRUCTURAL ANALYSIS STUDY FOLDER |                    |                      |            |  | The top-level folder containing all the files relating to a three-dimensional model.             |
|  |                                  | ARCHIVES           |                      |            |  | Old assemblies and part files that are no longer used or referenced in any studies.              |

|          |                |            |  |  |  |  |
|----------|----------------|------------|--|--|--|--|
|          |                | AUTOBACK   |  |  |  | Within Autodesk 3Ds Max, scene files are auto-saved to this location.  |
|          |                | EXPORT     |  |  |  | Parts and assemblies that are to be exported back into the Technical Model reconstruction.   |
|          |                | IMPORT     |  |  |  | Models to be imported into inventor after changes or adaptations to the structure has been made in response to structural analysis.  |
|          |                | PARTS      |  |  |  | The parts used to create the assemblies.   |
|          |                | ASSEMBLIES |  |  |  | The assemblies and studies saves.  |
|          |                | REPORTS    |  |  |  | Results stored as .csv files and images.   |
| RECORDS  |                |            |  |  |  | Three-dimensional representations of archaeological data comprising of vectors, points, and meshes.  |
|          | POINT-CLOUDS   |            |  |  |  | Three-dimensional representations of archaeological data as point clouds.  |
|          | MODELS         |            |  |  |  | Three-dimensional representations of archaeological data as meshed models.   |
|          | CONTROL POINTS |            |  |  |  | Control points used to georeference and align three-dimensional representations of archaeological data.  |
|          | CALIBRATIONS   |            |  |  |  | Calibrations used to align photographs for three-dimensional representations of archaeological data.   |
| DATA     |                |            |  |  |  | Geodata  |
| DATABASE |                |            |  |  |  |  |
| SURVEY   |                |            |  |  |  | Structured records of archaeological data often stored as tabular data contained within discrete files or organised within databases, geodatabases.  |
|          | DATA           |            |  |  |  | Data usually imported as tables from   |
|          | EXCAVATION     |            |  |  |  | Point, line, and polygon data relating to or gathered from excavations. This will typically not include features such as masonry walls or building/room points as these are also produced out of the trench. |

|                        |                   |  |  |  |  |   |
|------------------------|-------------------|--|--|--|--|---|
|                        | GEOGRAPHY         |  |  |  |  | Point, line, and polygon data relating to the local geography including place names, building outlines (unless surveyed), rivers and roads.   |
|                        | GEOLOGY           |  |  |  |  | Point, line, and polygon data relating to underlying geology, geological features. This does also include soil data.  |
|                        | SURVEY_PROCESSED  |  |  |  |  | Point, line, and polygon data representing masonry features, building surveys, drawing locations and any measured or measurable data that is created that does not fit in the above categories. |
|                        | SURVEY_RAW        |  |  |  |  | Point, line, and polygon data representing the working datasets directly output from survey instruments. The processed data can be considered the 'master' copy used for analysis.              |
|                        | GRIDS             |  |  |  |  | Point and polygon data relating to the site grid.   |
|                        | DOCUMENTS         |  |  |  |  | Reports   |
|                        | FIELDWORK RECORDS |  |  |  |  | Formalised longform textual content or primary textural records relating to archaeological data either of digital origin or digitised from physical records.                                    |
| DRAWINGS               |                   |  |  |  |  | Technical Drawings  |
| ARTEFACT ILLUSTRATIONS |                   |  |  |  |  |   |
| CAD                    |                   |  |  |  |  | Raster or vector data files conveying visual information of archaeological data as technical or illustrative representations.   |
| PHOTOGRAPHY            |                   |  |  |  |  | UAV   |
| SITE PHOTOS            |                   |  |  |  |  | Raster data records or archaeological data.   |
| PHOTOGRAMMETRY         |                   |  |  |  |  | Raster data records or archaeological data.   |
| ARTEFACTS              |                   |  |  |  |  | Raster data records or archaeological data.   |

## Data Documentation and Description

### What documentation will you keep?

Data will be stored, recorded, and organised according to the best practices outlined by the Archaeology Data Service (ADS) for the storage and archiving of digital data, including raster and vector data, geophysical data, geospatial data, three-dimensional data, and alpha-numeric documentary data.

**Project Level Metadata**

| Human Name    | Metadata Name       | General Description   |
|---------------|---------------------|---|
| Project Title | PROJECT_TITLE       | The title (and any alternatives such as site codes) for the dataset.  |
| Description   | PROJECT_DESCRIPTION | A brief summary of the main aims and objectives of the research project from which the data collection arose together with a brief summary description of the content of the dataset.   |
| Subject       | PROJECT_SUBJECT     | Keywords for the subject content of the dataset (qualified using controlled terms such as those supplied by the Forum on Information Standards in Heritage (FISH))  |
| Coverage      | PROJECT_COVERAGE    | This is both spatial and temporal coverage. For spatial coverage it should include the current and contemporary name(s) of the country, region, county, town or village covered by the data collection and, where possible, a standardised reference should be used. If names or administrative units were different during the time period covered by the data they should be recorded separately. Site coordinates can also be entered as a National grid reference in a number of different ways e.g., as a point (useful to describe a small project area via a central coordinate); as a line (e.g., at least two coordinates to represent the linear limits of the site); as a polygon (for a more complex site area, three or more coordinates are used to describe the boundaries). If applicable, the full postal code for the site can be included. For temporal coverage it should include the dates/period covered by the dataset (using existing thesauri where possible such as the Forum on Information Standards in Heritage (FISH) Period List). |

|                   |                      |  |
|-------------------|----------------------|--|
| Projection System | PROJECT_PCS          | Projected Coordinate System used.  |
| Coordinate System | PROJECT_GCS          | Geographic Coordinate System used.   |
| Creators          | PROJECT_CREATORS     | Details of the creator(s), compiler(s), funding agencies, or other bodies or people intellectually responsible for the data collection. Information should include forename, surname, affiliation, address, phone, fax, email, or URL.                           |
| Publisher         | PROJECT_PUBLISHER    | Details about any organisation which has published this data.  |
| Contributors      | PROJECT_CONTRIBUTORS | Other individuals or organisations who have contributed to the resource.   |
| Identifiers       | PROJECT_PROJECTID    | Project or reference numbers or site codes used to identify the dataset.   |
| Dates             | PROJECT_DATES        | Dates indicating when the dataset was created, when the archaeological project was carried out, processing dates, or computerisation dates as appropriate.   |
| Copyright         | PROJECT_COPYRIGHT    | The name of the copyright holder for the dataset. If the collection was created during work by an employee, the copyright holder will normally be the employer. If the material is covered by a specific copyright (e.g., Crown copyright) please indicate this. |

|               |                   |   |
|---------------|-------------------|---|
| Relations     | PROJECT_RELATIONS | If the data collection was derived in whole or in part from published or unpublished sources, whether printed or machine-readable, this element should include references to the original material, details of where the sources are held and how they are identified there (e.g., by accession number). If the collection is derived from other sources include an indication of whether the data represents a complete or partial transcription/copy and the methodology used for its digitisation. Also include full references to any publications about or based upon the data collection. |
| Language      | PROJECT_LANGUAGE  | Indication of which language(s) the dataset is in (e.g., English, French, Spanish).   |
| Resource Type | PROJECT_TYPE      | Whether the dataset is best described as primary data, processed data, an interpretation of data, or a final report.  |
| Format        | PROJECT_FORMAT    | The formats the data within the project is saved in (e.g., WordPerfect 5.1, HTML, AutoCAD).   |

#### General File Level Metadata.

| Human Name            | Metadata Name   | General Description   |
|-----------------------|-----------------|---|
| File Name             | FILE_NAME       | The name of the file e.g., report.doc   |
| File Format           | FILE_FORMAT     | The file format e.g., PDF/A or Open Office Document   |
| File Location         | FILE_LOCATION   | The file path i.e. directory and filename e.g., /adsdata/cottam_ba/jpg/fwking_plan.jpg  |
| Software Name         | FILE_SOFTWARE   | The software used to create the file e.g., Microsoft Word 2007  |
| Hardware used         | FILE_HARDWARE   | The hardware used to create the file, this is more significant when files are created directly by survey equipment such as laser scanners or GPS devices. |
| Operating System Used | FILE_OPSYS      | The operating system under which the file was made e.g., Windows XP or Mac OS X 10.5.   |
| Date of Creation      | FILE_CREATED    | When the file was made.   |
| Date of Last Update   | FILE_UPDATED    | When the file was updated.  |
| Linked Files          | FILE_LINKED     | This element should be used to highlight relationships between files.   |
| Identifiers           | FILE_IDENTIFIER | This element should be used to highlight whether a file is a source file or derived from another.   |
| Creator               | FILE_CREATORS   | The file path i.e. directory and filename e.g., /adsdata/cottam_ba/jpg/fwking_plan.jpg.   |
| Copyright             | FILE_COPYRIGHT  | Details of copyright or other rights and holder details.  |

**Raster & Vector File Metadata.**

| Human Name              | Metadata Name    | General Description  |
|-------------------------|------------------|--|
| Title                   | FILE_TITLE       | The title of the image or a suitable caption.  |
| Description             | FILE_DESCRIPTION | Description of the image.  |
| Coverage                | FILE_COVERAGE    | Site location and description. The address, or coordinates for the subject and a description of the subject. Coverage should also include any relevant period terms. |
| Projection System       | FILE_PCS         | Projected Coordinate System used.  |
| Coordinate System       | FILE_GCS         | Geographic Coordinate System used.   |
| Keywords                | FILE_KEYWORDS    | Keywords e.g., period, site or feature terms. Use suitable thesauri where they exist.  |
| File Format and Version | FILE_VERSION     | e.g., TIFF 6.0.  |
| File Size               | FILE_SIZE        | Size of the file in bytes.   |
| Resolution              | FILE_RESOLUTION  | The resolution of the image measured in pixels per inch (ppi).   |
| Dimensions              | FILE_DIMENSIONS  | Dimensions of the image in pixels e.g., 400 x 700px.   |
| Colour Space            | FILE_COLOUR      | The colour space used in the image e.g., RGB or grayscale.   |
| Bit Depth               | FILE_BITDEPTH    | e.g., 24bit or 8bit.   |

**Three-Dimensional Record File Level Metadata.**

| Human Name        | Metadata Name   | General Description  |
|-------------------|-----------------|--|
| Subject           | FILE_SUBJECT    | Keywords for the subject content of the dataset (qualified using e.g., the English Heritage NMR Monument Type Thesaurus or the MDA Object Type Thesaurus.            |
| Intended accuracy | FILE_Accuracy   | The originally intended accuracy or scale that the survey was to achieve.  |
| Coverage          | FILE_COVERAGE   | Site location and description. The address, or coordinates for the subject and a description of the subject. Coverage should also include any relevant period terms. |
| Projection System | FILE_PCS        | Projected Coordinate System used.  |
| Coordinate System | FILE_GCS        | Geographic Coordinate System used.   |
| Keywords          | FILE_Keywords   | Keywords e.g. period, site or feature terms. Use suitable thesauri where they exist.   |
| Dates             | FILE_DATES      | Dates indicating when the dataset was created, when the archaeological project was carried out, processing dates, or computerisation dates as appropriate.           |
| Identifiers       | FILE_PROJECTID  | Project or reference numbers or site codes used to identify the dataset.   |
| Resolution        | FILE_RESOLUTION | The resolution of the image measured in pixels per inch (ppi).   |
| Dimensions        | FILE_DIMENSIONS | Dimensions of the image in pixels e.g., 400 x 700px.   |
| Colour Space      | FILE_COLOUR     | The colour space used in the image e.g., RGB or grayscale.   |
| Bit Depth         | FILE_BITDEPTH   | e.g., 24bit or 8bit.   |

**Three-Dimensional Record Control Point Metadata.**

| Human Name        | Metadata Name                      | General Description   |
|-------------------|------------------------------------|---|
| Coordinates       | CONTL_X,<br>CONTL_Y,<br>CONTL_Z,   | List the three-dimensional coordinates for each control point.  |
| Covariance        | CONTL_CX,<br>CONTL_CY,<br>CONTL_CZ | Provide full correlation if available (from survey adjustment or GPS baseline solution), otherwise provide estimated standard deviation or variance of each coordinate. |
| Location          | CONTL_Location                     | Textual description of location.  |
| Dates             | FILE_DATES                         | Dates indicating when the dataset was created, when the archaeological project was carried out, processing dates, or computerisation dates as appropriate.              |
| Identifiers       | FILE_PROJECTID                     | Project or reference numbers or site codes used to identify the dataset.  |
| Coverage          | FILE_COVERAGE                      | Site location and description. The address, or coordinates for the subject and a description of the subject. Coverage should also include any relevant period terms.    |
| Projection System | FILE_PCS                           | Projected Coordinate System used.   |
| Coordinate System | FILE_GCS                           | Geographic Coordinate System used.  |

**Geographical Information System File Metadata.**

| Human Name        | Metadata Name   | General Description  |
|-------------------|-----------------|--|
| Scale             | FILE_SCALE      | Scale/resolution of data capture, e.g., 1:1250   |
| Method            | FILE_Method     | Method of original data capture, e.g., Total Station Survey, etc.  |
| Dates             | FILE_DATES      | Dates indicating when the dataset was created, when the archaeological project was carried out, processing dates, or computerisation dates as appropriate.           |
| Identifiers       | FILE_PROJECTID  | Project or reference numbers or site codes used to identify the dataset.   |
| Coverage          | FILE_COVERAGE   | Site location and description. The address, or coordinates for the subject and a description of the subject. Coverage should also include any relevant period terms. |
| Projection System | FILE_PCS        | Projected Coordinate System used.  |
| Coordinate System | FILE_GCS        | Geographic Coordinate System used.   |
| Identifiers       | FILE_PROJECTID  | Project or reference numbers or site codes used to identify the dataset.   |
| Resolution        | FILE_RESOLUTION | The resolution of the image measured in pixels per inch (ppi).   |
| Dimensions        | FILE_DIMENSIONS | Dimensions of the image in pixels e.g., 400 x 700px.   |
| Colour Space      | FILE_COLOUR     | The colour space used in the image e.g., RGB or grayscale.   |
| Bit Depth         | FILE_BITDEPTH   | e.g., 24bit or 8bit.   |

#### Three-Dimensional Model File Metadata.

| Human Name         | Metadata Name  | General Description  |
|--------------------|----------------|--|
| Number of Vertices | FILE_VERT      | The number of vertices (points) in the model   |
| Number of Polygons | FILE_POLY      | The number of triangles or polygons in the model   |
| Geometry Type      | FILE_GEOMTYPE  | The type of geometry used within the model (wire frame, parametric, etc. if applicable). |
| Scale              | FILE_UNITSCALE | What scale is represented by 1 unit.   |

|                               |                |  |
|-------------------------------|----------------|--|
| Coverage                      | FILE_COVERAGE  | Site location and description. The address, or coordinates for the subject and a description of the subject. Coverage should also include any relevant period terms.                 |
| Projection System             | FILE_PCS       | Projected Coordinate System used.  |
| Coordinate System             | FILE_GCS       | Geographic Coordinate System used.   |
| Basic, Technical, or Extended | FILE_TYPE      | Is the model the master model produced just after raw data processing, or is it a derived model produced from the master (e.g. after hole filling, simplification, smoothing, etc.)? |
| Level of Detail               | FILE_LOD       | How detailed is the model, what is the resolution of the scan.   |
| Layers                        | FILE_LAYERS    | Does the model use layers? How many?   |
| Colour and Texture            | FILE_TEXTURES  | Does the model contain colour or texture information? How is this stored? If raster texture files are used then these have to be archived separately.                                |
| Material                      | FILE_MATERIAL  | Information about the material properties of the model and whether they match the physical properties of the actual object.  |
| Light Source(s)               | FILE_LIGHT     | Number and accuracy of light sources used in the model.  |
| Shader                        | FILE_SHADER    | Have special or extended shaders been used?  |
| Animation                     | FILE_ANIMATION | Whether animation is used in the model along with description of type (keyframe, motion capture).  |

## Data Sharing

**What are your plans for publishing data?**

Data will be published through the University of Bristol Research Data Repository (data.bris). The data.bris Repository offers a means for Bristol's researchers to openly share non-confidential research data, without the need for external data users to undergo any form of authentication. Each deposit is accompanied by appropriate metadata and is assigned a unique Digital Object Identifier (DOI) via the DataCite scheme. All data published by the Repository is available under a permissive re-use license.

**Are there any ethical, commercial, legal or IPR issues which might apply when publishing your data?**

There are no ethical, commercial, legal or IPR issues with publishing this data.

## Planned Research Outputs

### Model representation - "Kings Weston Roman Villa (Basic Model)"

This dataset includes preliminary 3D models of the Kings Weston Roman Villa, focusing on various potential reconstructions. These basic, low-poly models are instrumental in visualizing different architectural possibilities, serving as a foundation for more detailed reconstructions. They are primarily untextured or minimally textured, facilitating initial explorations of the villa's structure.

### Model representation - "Kings Weston Roman Villa (Technical Model)"

Advancing from the basic models, this dataset features detailed technical 3D reconstructions of the Kings Weston Roman Villa. These models are higher in polygon count and include more intricate details while keeping texturing limited. Essential for in-depth archaeological analysis, they provide a more accurate depiction of the villa based on archaeological findings and hypotheses.

### Dataset - "Finite Element Analysis Models of Kings Weston Roman Villa"

This series comprises detailed 3D models for structural analysis of the Kings Weston Roman Villa using Finite Element Analysis (FEA). These models incorporate accurate geometries and material properties, allowing simulations under various stress conditions to understand the villa's structural integrity and historical construction techniques.

### Dataset - "Survey Data Collection of Kings Weston Roman Villa"

This collection encompasses diverse survey data of the Kings Weston Roman Villa, including GIS shapefiles, CSV files, CAD drawings, and PDFs of these drawings. It provides a multifaceted view of the villa, crucial for archaeological research, site management, and preservation planning.

### Dataset - "Lighting Analysis Results of Kings Weston Roman Villa Models"

This dataset contains rendered images from Lighting Analysis tests conducted on the Basic and Technical Models of the Kings Weston Roman Villa at key times like equinoxes and solstices. The images show varying illumination levels in Lux, providing insights into the interplay of light and structure across different seasons and times of day.

### Text - "PhD Thesis: "Virtual Ruins, Real Insights: Establishing A Framework for three-dimensional Modelling in Archaeology""

Alexander T. R. Birkett's PhD thesis at the University of Bristol's Department of Archaeology & Anthropology critically re-evaluates 3D modelling in archaeology, with a focus on methodological rigor over physical fidelity. The thesis integrates techniques like photogrammetry and Finite Element Analysis into a comprehensive framework, applied to case studies including the Kings Weston Roman Villa.

### Text - "Terrestrial and Aerial Photogrammetry Survey of Kings Weston Roman Villa"

This report presents findings from a terrestrial and aerial photogrammetry survey of the Kings Weston Roman Villa, prepared for the local Historic Environment Record (HER). It offers an in-depth analysis using advanced photogrammetry techniques, contributing valuable data for archaeological research and heritage management.

### Dataset - "Photogrammetry Survey Dataset of Kings Weston Roman Villa"

The photogrammetry survey dataset includes 3D models, point clouds, and photographs, capturing detailed features of the Kings Weston Roman Villa. This accurate spatial and geometric data is essential for reconstructive analysis and preservation efforts, providing comprehensive insights into the villa's current condition and historical layout.

## Planned research output details

| Title  | Type                 | Anticipated release date | Initial access level | Intended repository(ies)           | Anticipated file size | License                              | Metadata standard(s) | May contain sensitive data? | May contain PII? |
|--|----------------------|--------------------------|----------------------|------------------------------------|-----------------------|--------------------------------------|----------------------|-----------------------------|------------------|
